

# Cure Your Database Headache with a Health Check

Are complaints about speed issues and system usability driving you crazy? We get it. Your database performance directly affects your company's bottom line. You need help, and you need help now.

## The Prescription for Your Database Woes

Database problems happen. Sometimes applications become slow after roll ups or adding users. Sometimes you just outgrow your database, network or hardware. Whatever the case, your customers expect their information to be correct and quickly accessible, 24 hours a day, 365 days a year.

## How the Health Check Works

The Database Health Check is a proven, three to five-day on-site consulting solution, for swiftly identifying your database pain points and improving the application experience.

First, we fix all immediate issues to ease your pain. Then, our experts examine your target DBMS, service packs, and administration procedures. We look for performance optimization opportunities and potential scaling issues, and rank them by priority.

Finally, we deliver a detailed prescription for optimal performance solutions and train your IT team to understand what happened so they can avoid similar problems in the future.

## One Of Our Success Stories

We recently helped an internet company that sells printer ink and toner cartridges online, reduce database response time from 9.5 to 0.24 seconds. This directly improved their web customer retention rate and the accounting team determined that profits increased by \$75,000 per month.

## Benefits Of Our Service

Positively Influence Bottom Line

Boost Employee Productivity

Increase Customer Satisfaction

Improve Work-Life Balance for Your Team
